Earthquake

09 November 2024

Preliminary Event Briefing

11 November 2024

1 INTRODUCTION

A magnitude 5.8 earthquake occurred at 19:30:18 (UTC) on 09 November 2024, located at 79.4 km (49.3 mi) NW of Burica, Chiriquí Province, Panama; 98 km (60.6 mi) N of Pedregal, Chiriquí Province, Panama and 101 km (62.8 mi) NNW of Puerto Arguelles, Chiriquí Province, Panama. Initial estimates from the United States Geological Survey (USGS) located the epicentre of the event at 7.497°N, 82.396°W, and at a depth of 10 km (6.21 mi). – Figure 1.

Panama was the only CCRIF member country where peak ground acceleration, computed with the SPHERA model, was greater than 0.03 g for this earthquake.

Preliminary runs of CCRIF’s loss model estimated no government losses for Panama and therefore no payout is due under the earthquake policy.

2 CCRIF MODEL OUTPUTS

Under CCRIF’s loss calculation protocol, a report using the CCRIF SPHERA model is produced for any earthquake with a magnitude greater than or equal to 5.0 that occurs within the region monitored by CCRIF and which generates a peak ground acceleration of at least 0.03 g in one or more grid cells of at least one CCRIF member country. Based on the SPHERA footprint for this earthquake, peak ground acceleration of up to 0.5 g was estimated in Panama (Figure 2), but under the SPHERA model, the earthquake generated a loss estimation of zero.

3 IMPACTS

At the time of writing this report, there was no available information on damage or loss in Panama due to this earthquake.

According to the USGS “Did You Feel It?” online tool, 26 persons in Chiriquí, Panama within a radius greater than 100 km (62.13 mi) from epicentre reported the earthquake as being a “weak shake with no damage” (Mercalli intensity: II-III)

4 TRIGGER POTENTIAL

Preliminary runs of the CCRIF loss model for peak ground acceleration produced no government losses for Panama. Therefore, no payout is due under this country’s earthquake policy.
